

CodingHead - Marking, Labelling

155 YEARS
TRADITIONALLY
INNOVATIVE

The CodingHead is the optimal supplement for the following workflow: sorting, allocating, differentiating, marking, picking..., with numerous cuts, the individual pieces can be easily mixed up. For the next work step markings are needed or pairings put together.

With the CodingHead you have a standard tool with various ink types for differing requirements at your disposal. It uses the print technology of the Hewlett Packard industry cartridges, which are just as easy to change as with a desktop printer.

The print files are created as part of the cutting files and transferred to the ARISTOMAT[®].

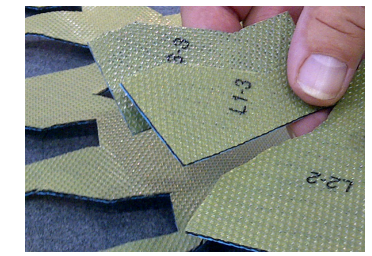

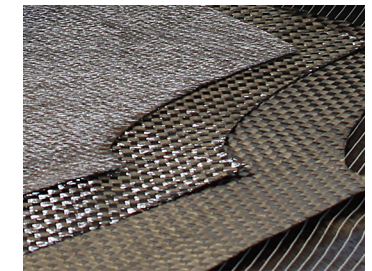

The CodingHead is available for all ARISTOMAT[®] of the series GL, TL and LFC[®].
