

PunchingDevice HD - for punching of different materials

The PunchingDevice HD is the solution when a high number of holes has to be cut. Where the use of knives or oscillating knives would take too long or be too inaccurate, the PunchingDevice HD comes into play and raises productivity.

The rotary punching process features best results at quick speeds. A supported suction system removes the cut outs.

The capability to use the PDHD such as the usable speed and hole size depends on the kind of material and its thickness.

Ask us to test your material with this new power tool head.

Features

- ✓ hole puncher from Ø 2 mm
